I am a student pursuing Business Information Technology (BIT) at Laurea University of Applied Sciences. My academic focus has been developing digital services, and I am particularly driven to become a full-stack developer. Alongside my formal education, I have actively engaged in self-directed learning in web app development. My aim is to merge these skills to contribute effectively to dynamic environments, where I can bring innovative and impactful digital solutions to life.

PROJECTS

1. NextCord – Discord clone with Next.js

- Developed using Next.js for frontend and backend development.
- Developed using TypeScript for enhanced type safety and improved code quality.
- Integrated NextAuth for robust user authentication and authorization.
- Styled the application utilizing Next UI, Shadcn, and Tailwind CSS for a visually appealing interface.
- Managed data with Prisma ORM connected to MySQL database for efficient storage.
- Implemented real-time chat features using Socket.IO to enable fluid communication.
- Enabled seamless image uploads with Uploadthing for media sharing.
- Integrated LiveKit to facilitate audio and video calls.
- Links: [Demo](#) // [Repository](#)

2. Blog App with Full-Stack Functionality

- Developed a blog application using React for frontend and Node.js and Express.js for backend.
- Implemented MongoDB for database management and integrated user authentication with JWT.
- Demonstrated proficiency in creating a fully functional web application.
- Links: [Demo](#) // [Repository](#)

3. Movie App with TMDb API Integration

- Built a movie application using React, integrating data from the TMDb API to dynamically fetch and display movie and tv show information.
- Implemented React Router for seamless navigation between different movie details, tv show details and search functionality.
- Tailwind CSS was utilized for comprehensive styling across the app.
- Links: [Demo](#) // [Repository](#)
- Incorporated search query functions enabling users to search for specific movies or tv shows.

4. E-commerce Website using React

- Built an e-commerce platform utilizing React for frontend development.
- Utilized Material UI for UI components and styled-components for customized styling.
- Implemented react-router for seamless navigation.
- Links: [Demo](#) // [Repository](#)
