PERSONAL PROJECTS

POST – Blogging Web Application [🔗](#)

- Developed backend using Node.js and Express.js for handling of server-side operations.
- Integrated image uploads to Amazon S3 through presigned url that allows the frontend to upload directly to the bucket.
- Utilized Editor.js for creating organized and visually appealing blog content.

Tune - Music app [🔗](#)

- Developed using HTML, CSS and Vanilla JS only.
- Single page application that handles different routes with Javascript. Configured Netlify to respond with the html file for all routes.
- During development used a Node.js server to serve the html for every route request.

The Hub – Movie and TV App [🔗](#)

- Developed a Movie/TV app using React and TMDb API for data.
- Enabled search functionality using query parameters.

NextCord – A Discord Clone [🔗](#)

- Developed a Discord clone using Next.js.
- Implemented real-time chat functionality, along with image sharing features within the platform.
- Enabled audio and video call capabilities to facilitate real-time communication between users.

TRAINING

Frontend Developer Training Program Kreativstorm

01/2024 - 02/2024

Berlin, Germany, Remote

Creative agency that specializes in developing innovative and strategic solutions for businesses

Tasks/Achievements

- Contributed to the development of impactful user interfaces using only HTML, CSS, and JavaScript, demonstrating fundamental knowledge as well as a keen eye for design and attention to detail.
- Gained practical experience working in a team environment, enhancing both core abilities and tech skills (git, GitHub).
